JUDGEMENT PARAMETERS

I would like my software to be judged on the following three parameters:
- The idea of keeping your Facebook friends chatting with you while you are away from keyboard or away from Facebook
- Versatile answers to messages/chats.
- The ability to keep running the software online on the cloud, so that the bot does not have to run locally

Each of them is illustrated hereunder:

KEEPING YOUR FACEBOOK FRIENDS AWARE OF YOUR NON PRESENCE

If you are away from keyboard or are in a situation when you do not have time to reply to your Facebook messages, this chat bot would reply and continue the conversation on your behalf. It gives **very funny and versatile answers** that nobody would expect it were a bot. You could set a **dummy message** to be sent to your friends as is done in case of e-mails.

VERSATILE ANSWERS TO MESSAGES

Cleverbot is a very good bot engine as it has different verities of crowd sourced answers for all kinds of questions. You can visit cleverbot.com and see for yourself how good it is. The messages are generated using cleverbot.com which is trained using large corpora of message replies

Here is an attached conversation where the person X is chatting with me, and the replies are getting generated by the bot.

Person X

Reply from chat bot

Person X

Person X

Reply from chat bot

Person X

what makes you think you are not the idiot here?

Reply from chat bot

I can because I can, it does not mean you have follow the instruction. There is no obligation.

Person X

how far do you think you will go with this kind of attitude?

Reply from chat bot

Thank you?! Jeez, I have no idea what you're thinking?!

Person X

Person X
